规划构架曾水平展开，空间尺度力求舒展，视野开阔。规划中心景观轴将小区分为南北两部分，组团景观在建筑间形成收放，相互渗透。开敞空间与建筑相呼应，深入各个组团。建筑群体现技术创新所带来的不断克服地心引力而达到新的高度，表达出不断超越的人文精神和力量。通过新颖的造型、艳丽夺目的色彩以及刚性材料的运用，成为一种现代艺术的符号。□

In the master plan, buildings are laid out horizontally creating comfortably extending spaces with good open views. The central landscape axis divides the complex into south and north portions. Small-scale landscape gardens create semi-enclosed and semi-open spaces in between the buildings which are interconnected. Open space responds to the architecture and goes deep into each residential group. New height is achieved in this complex through technology innovation which constantly tries to challenge the constraint of gravity, expressing the spirit and strength of the determination always striving for the better. It becomes a symbol of modern art through creative form, radiant colors and the application of hard materials.□
